

# FMS Skills Training

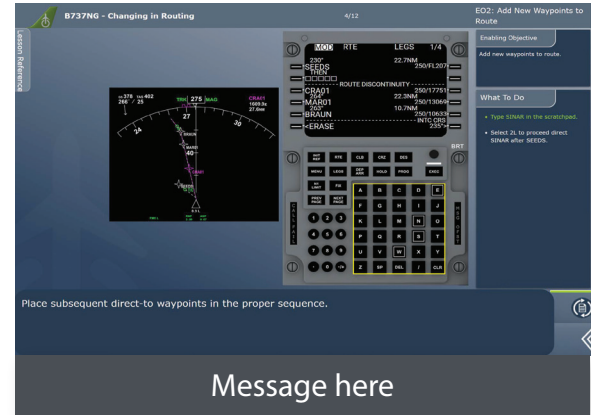

## FMS Programming Skills Ahead of Simulator Training

### OVERVIEW

CPaT's **FMS Skills Trainer** is a component of CPaT's Aircraft Procedures Suite, and offers a keypad emulator ideal for training FMS procedures. The course comes pre-loaded with standard procedure lessons that are perfect for teaching students essential CDU skills ahead of costly simulator training.

The FMS Skills Trainer is available in three different modes, including **Demo, Practice, and Perform**. The various use modes allow students to practice and master key skills, and instructors can confirm that knowledge has been retained through the Perform "test" mode and evaluation.

When paired with **Invent**, CPaT's content creation and editing software, airlines can develop unlimited lesson specific to standard operating procedures and make real-time modifications on-demand.

### KEY FEATURES

- FMS Skills Trainer
- Configurable to enable training on many FMS functions, Including: **FMS initialization, Flight plan data, Operational exercises and SOPs, Departure and arrival procedures**, etc.
- Accessible online and offline
- Available for most CPaT's Aircraft Fleet Library

### PAIRED WITH CPaT INVENT

- Access to pre-set course structure and slide templates, of free form
- Add unlimited FMS exercises
- Make changes on-demand for immediate availability
- Edit with full authoring control - CPaT content or individual airline content
- Simple drag and drop sorting capability
- Apply personalization and your training culture to CPaT courseware
- Gain access to CPaT library of aviation imagery and assets
- Personalize with company reference material (documents, pictures, video)
- Modify text and audio, including translations
- Three use modes: Demo (Training), Practice (Quiz), Perform (Test)
