Walk Around Training
Uses Accurate Aircraft Models, Detailed pictures and OEM Procedures

OVERVIEW

CPaT's **Walk Around Trainer** is a component of CPaT's Aircraft Procedures Suite, and offers 3-D pre-flight Walk Around training. The course comes pre-loaded with standard procedures specific to the OEM Flight Crew Operating Manual, which are perfect for teaching students essential pre-flight and Walk Around procedures in a distance learning environment.

The 3D Walk Around Trainer is available in three different modes, including **Demo**, **Practice**, and **Perform**. The various use modes allow students to practice and master essential skills, and instructors can confirm the knowledge has been retained through the Perform "test" mode and evaluation.

When paired with **Invent**, CPaT's content creation and editing software, airlines can develop unlimited lessons tailored to their specific needs and make real-time modifications on-demand.

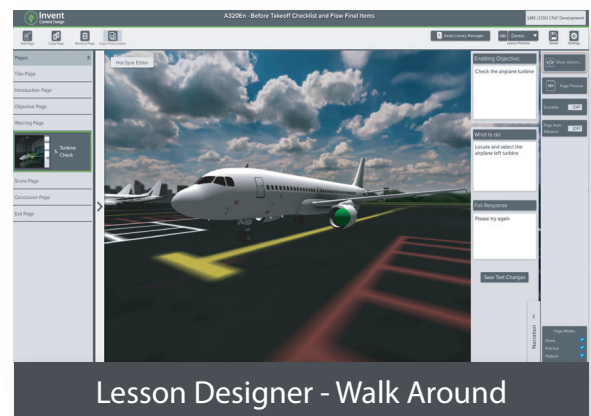

Walk Around Trainer

KEY FEATURES

- 3-D Walk Around Distance Learning
- Train pre-flight checklist and flows ahead of simulator training
- Pre-loaded OEM procedures
- Adaptable to Virtual Reality *(Coming Soon)*
- Accessible online and offline
- Available for most CPaT's Aircraft Fleet Library

Engine Task

PAIRED WITH CPaT INVENT

- Access to pre-set course structure and slide templates, or free form
- Add unlimited lessons tailored to your needs
